Weather Key Points

Regional Operations Center

Western Region

Tuesday, December 6

- No widespread significant weather impacts are expected across the state through Wednesday night, with just some lingering showers at times across central and southern California. A few thunderstorms are also possible across coastal central California through Tuesday evening.
 - Average rainfall amounts look to be less than ¼ inch
 - Snow levels will remain generally 4,500 feet or higher, with no significant snow accumulation expected
- Areas of overnight and early morning dense fog are likely across the Central Valley through late week, bringing periods of greatly reduced visibility
- The weather pattern will become more active once again for late week and the weekend as a series of storms likely brings additional widespread rain and mountain snow
 - The exact details remain somewhat uncertain at this time but heavy mountain snow appears increasingly likely that could result in travel impacts
 - Snow levels also look to be lower than the more recent storm, perhaps down to 3,000 to 5,000 feet over more of the state

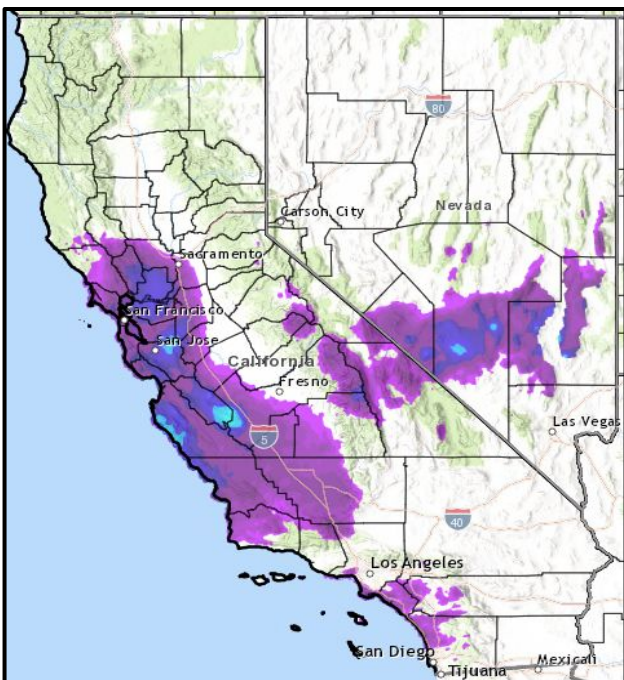

Daily Precipitation Forecast

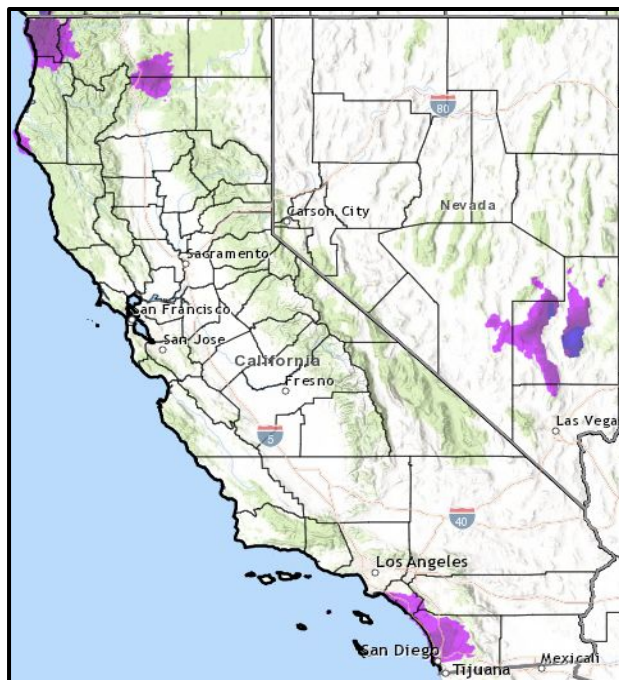

Regional Operations Center

Western Region

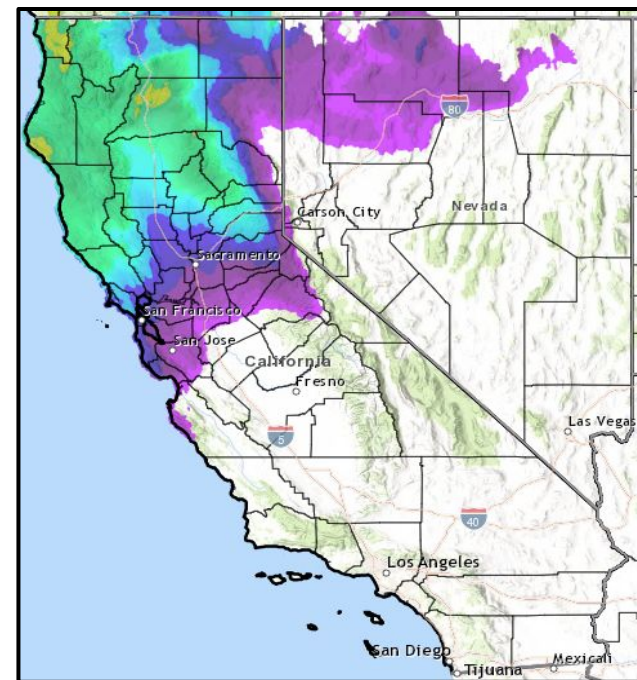

Tuesday, December 6

Tuesday

Wednesday

Thursday

Important Note: Forecast precipitation amounts are an average for any particular location. Thunderstorms will produce locally much higher rainfall amounts.

Precipitation (inches)

Weather Outlook (6-14 Days)

Regional Operations Center

Western Region

Tuesday, December 6
